5555 GULF BLVD. SUITE 203
SAINT PETE BEACH, FLORIDA
33706

OCT 19 1966

Dear F.C.C: RECEIVED

This letter is to inquire what the status of RM-9242 is?

The passage of RM-9242 would bring much more diverse programming around the country, it would also bring with it job opportunities which in turn would decrease the need for public assistance and improve the labor statistics. These are only some of the benefits of the passage of RM-9242.

There used to be a commercial radio station on Saint Pete Beach, Florida as late as the early 1960s but due to economic reasons it was closed down. Our personal goal at Bell Buoy Communications is two fold; first would be to establish a radio station in the community of Saint Pete Beach, Florida and second will be to introduce a totally new radio programming idea that will appeal to everyone not just a target audience along with this new programming will be a new approach to the radio personalities that will be on the air.

There will be a great benefit to having a community radio station on Saint Pete Beach, Florida in that it will provide more timely information when a major storm such as hurricane Georges came close to the area. It would also provide more local information such as events that are taking place for both the tourists and the people who live year round.

Please Send The Proper Forms Once They Become Available For Low Power FM,
